

# Vinay Rawat

## FULL STACK DEVELOPER

### ABOUT ME

I like coding and building products end to end. It doesn't feel like work and engineering has always been a passion.

### Tech Stack I've worked in

- **Flutter**  
I've used flutter for creating high quality and performant mobile apps.
- **Frappe**  
Frappe is a low-code framework, I've used frappe for creating web applications for businesses and also for creating back-end for mobile apps.
- **NodeJS (NestJS, Express)**  
I've used nodejs frameworks like NestJs and Expressjs for creating back-end servers for applications. I've shifted to NestJS because it's also support micro-services architecture
- **Frontend (React, NextJS, VueJs)**  
To create frontend of applications i've used NextJs, ReactJS, VueJs javascript frameworks because they are component driven frameworks which help us to properly manage code and scalability of applications.
- **ZOH0 Development**  
I've created many solution in zoho ecosystem like ticket management system in zoho crm with technician geocoding and technician charges based on distance they've travelled of ticket
- **Analytics/ BI Tools**
  1. Zoho Analytics
  2. Frappe Insights
  3. Prometheus
  4. Pagerduty
- **BASS**
  1. Zoho Catalyst
  2. Firebase
  3. Supabase
  4. AWS

### WORK EXPERIENCE

- **Extension Technologies, Faridabad, HR, IND**  
**FULL STACK DEVELOPER** Feb 2022 - Present  
**Implemented Order Management System Mobile App in Flutter with python based frappe framework as a backend from scratch with 80% offline functionality:**
  1. The OMS mobile app covers both the B2C and B2B perspective, including catalog view with variant, category, stock, trending, and others options with the functionality of placing orders, wishlist management, user management, order tracking with live location and minimum tap view.
  2. Backend of the OMS app includes proper order management with organization flow that involves dispatch users, accounts users and reports for insights.
  3. Event driver Notifications are sent to the customer, dispatch user, accounts person and the Admin. Also Insights  
**Working on Lead Management System Mobile App in Flutter with python based frappe framework as a backend and oine based model:**

The LMS app includes lead creation, lead assignment, scheduling meetings and follow ups, calendar view and quote creation, negotiation, and approvals from seniors.

  1. Backend of the app includes an Erp SAAS solution with reports.
  2. Relevant notifications are received by the user according to the workflow
- **Deployment and Testing**  
Deploying multiple tools and giving training to employees on how they can utilize the new tool in their workflow. Tools like Gitlab, Portainer for container management, CI/CD pipeline of auto-publishing for mobile apps, Grafana for server monitoring, InfluxDB for API monitoring, Posthog for user interaction tracking, Docusarus for documentation
- **Extension Technologies, Faridabad, HR, IND**  
**SOFTWARE DEVELOPER - INTERN** Sep 2021 - Feb 2022  
**Shopify Integration**
  1. Integrated shopify API and webhooks with third party apps like low code platforms and CRM.
  2. Customized themes of shopify and added custom features like pincode availability check with javascript and liquid (Shopify's templating language).  
**Mobile Application Development**

Worked with mobile application developers and created high quality and performant mobile applications. Worked with many third party APIs and SDKs to create our applications.
- **EDUCATION**
  - **Bachelor of Computer Applications**  
**MD University, Rohtak** 2020-2023 (Expected)
